MysteryTwister C3

CAESAR ENCRYPTION

Author: Bernhard Esslinger

October 2010 (Update January 2024)

Challenge

The Caesar cipher belongs to the category of *monoalphabetic substitutions* and is by far not sufficient to secure sensitive information.

Decrypt the ciphertext given in the text file for this challenge (*mtc3-esslinger-05-caesar.txt*).

Hints: Be aware that the classic method was slightly modified (an alphabet with 62 characters was used) and maybe the encryptor made a mistake with two letters.
The plaintext is English and you have to get all upper and lower case letters right to get credits for this challenge.
